

Automation Server

Easily integrated with your current system, our Automation Server is the most reliable and flexible system on the market.

Real-time validation of events and materials allow for error-free broadcasting.

Save time and money with this straightforward, easy to learn interface.

Expand the system according to your growing needs and budget.

- Automate centralized or distributed, single or multi-channel stations.
- Secondary playlists allow for fast reactions to unforeseen situations.
- View and control local or remote playlists with our distributed client interface.
- Iconic warnings and errors to easily identify problems for error-free broadcasting.
- Unlimited number of relative events.
- Completely scalable and upgradeable.
